Scientific Computing HW 8

Ryan Chen

October 22, 2024

1. To show that the algorithms are equivalent, we rewrite $\alpha_k, r_{k+1}, \beta_{k+1}$. Rewrite α_k as

$$\begin{split} \alpha_k &= -\frac{r_k^T p_k}{p_k^T A p_k} \\ &= -\frac{r_k^T (-r_k + \beta_k p_{k-1})}{p_k^T A p_k} \\ &= \frac{r_k^T r_k}{p_k^T A p_k} \\ \end{split} \qquad p_k = -r_k + \beta_k p_{k-1} \\ = \frac{r_k^T r_k}{p_k^T A p_k} \qquad r_k^T p_{k-1} = 0 \text{ by Theorem 5.2 in [NW]} \end{split}$$

Rewrite r_{k+1} as

$$r_{k+1} = Ax_{k+1} - b$$

$$= A(x_k + \alpha_k p_k) - b$$

$$= Ax_k - b + \alpha_k Ap_k$$

$$= r_k + \alpha_k Ap_k$$

The expressions for α_k, r_{k+1} give

$$Ap_k = \frac{r_{k+1} - r_k}{\alpha_k} = \frac{p_k^T A p_k (r_{k+1} - r_k)}{r_k^T r_k}$$

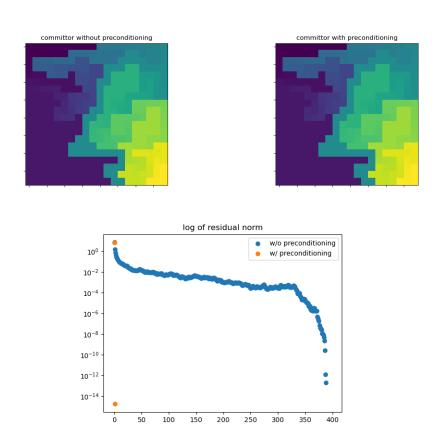

Use this to rewrite β_{k+1} as

$$\begin{split} \beta_{k+1} &= \frac{r_{k+1}^T A p_k}{p_k^T A p_k} \\ &= \frac{r_{k+1}^T (r_{k+1} - r_k)}{r_k^T r_k} \\ &= \frac{r_{k+1}^T r_{k+1}}{r_k^T r_k} \qquad \qquad r_{k+1}^T r_k = 0 \text{ by Theorem 5.3 in [NW]} \end{split}$$

- 3. (a) (b) (c) (d)

 - (e) (f)

 $4. \ \, {\rm Code:} \ \, https://github.com/RokettoJanpu/scientific-computing-1-redux/blob/main/hw8/hw8.ipynb \\$

CG with conditioning only took one iteration, resulting in only two plotted points.
